SUMMARY

Results-oriented Data Engineer with 4+ years of experience in building scalable data solutions using PySpark, AWS Services, and Databricks. Proven ability to deliver high-quality software while managing end-to-end data workflows, including ingestion, transformation and deployment. Seeking to apply my skills in Big Data and Cloud Technologies to drive impactful and efficient data-driven solutions.

TECHNICAL SKILLS

- PySpark, Python, SQL
- Azure Databricks, AWS
- ETL/ELT Development, CICD
- Data Pipeline Optimization
- GitHub, Snowflake
- Incident Management, Root Cause Analysis
- Redwood RMJ (Orchestration tool)
- Build comprehensive data lineage in Databricks

PROFESSIONAL EXPERIENCE

Data Engineer, Capgemini **June 2022 – Present**

- Designed and implemented a metadata-driven Data Quality framework (DQuS) on Databricks to validate large-scale ERP Master Data using PySpark.
- Developed and executed JSON-based validation rules (both predefined and custom using regex/SQL conditions), enabling flexible and scalable rule configuration without code changes.
- Built rule execution logic using DQuS framework (RFFactory & RFManager) to dynamically apply validations and generate row-level pass/fail results.
- Automated validation workflows in Databricks, including data ingestion, rule execution, result generation, and storage in Delta tables.
- Generated rule-wise output tables (e.g., MD_DQ_RESULT_*) and implemented result column generation logic (TRUE/FALSE → PASS/FAIL transformation).
- Enhanced existing validation rules and implemented new business logic using custom conditions (RFUserProvidedConditionDataFrame) to handle complex data quality scenarios
- Collaborated with business stakeholders to analyze failed records and improve data quality, reducing data inconsistencies in master data systems
- Designed and optimized scalable PySpark data pipelines, increasing processing performance by 30% for high-volume data workflows and critical business use cases.
- Integrated multiple data sources, including SQL databases, AWS S3, and Snowflake Data Warehouse, supporting dynamic data loading for end-to-end data processing.
- Collaborated with cross-functional teams to optimize data workflows, driving improvements in data quality, and increasing operational efficiency.
- Established and implemented GitHub version control best practices, enhancing collaboration and code traceability; guided teams on efficient branching strategies.
- Built and managed centralized data repositories in Databricks for processing and accessing market access and medical data for analytics.
- Implemented end-to-end CI/CD pipeline for seamless data integration from various sources to target layers, streamlining deployment and release cycles.
- Created and reviewed technical design documentation/SOP Documents to ensure accuracy and consistency in reporting solutions and data models.
- Proficient in Pyspark, to build custom scripts and automate data workflows.
- Created and maintained automated ETL pipelines to ensure efficient, reliable data flow and integration across multiple source systems into Snowflake.
- Led weekly Test and Production deployments, ensuring smooth operations across teams

- Supported CI/CD deployment and release management for rule updates across Dev, QA, and Production environments.

EDUCATION

CSIBER, Kolhapur **Aug 2018 - 2021**

Master of Computer Applications [MCA]

ADDITIONAL INFORMATION

- **Languages Known:** English, Hindi, Marathi
- **Certifications:** AWS Cloud Practitioner, AWS Database Specialty, Azure Data Fundamentals
- **Awards/Activities**: Achieved first prize in Entry Level Capgemini Training program, recognized as a "Rising Star" in 2025 for outstanding performance and contributions for (I&D).
